	Index	11

MATLAB2Py Image Analysis is a Python library to support some MATLAB functions for Image Analysis in Python. Function implementation is based on [MATLAB](#) Image processing techniques for image analysis documentation.

Note: This project is still in progress.

CHAPTER
ONE

IMAGE DISPLAY

```
imshow(I, grayscale_filter=None, title=None, figsize=None, cmap='gray', display_grid=False, gridcolor='w',
       gridwidth=2, linestyle='-')
```

Display image

Parameters

- **I** – image
- **grayscale_filter** – grayscale image display range as [low, high]
- **title** – title of the figure
- **cmap** – cmap of display
- **display_grid** – set to *True* to draw a pixel grid on top of the image

Returns

```
plot_images(images, figsize=(10, 5), cmap='gray', display_grid=False, gridcolor='w', gridwidth=2, linestyle='-')
```

Plot several images (max 10)

Parameters

- **images** – a list of images as [[<image>, <title>]]
- **figsize** – the size of final figure
- **cmap** – cmap of display
- **display_grid** – set to *True* to draw a pixel grid on top of the image

Returns

CHAPTER
TWO

IMAGE EXPLORATION

imhist(*I, n: int* = 20, *figsize=(15, 5)*, *filename: str* = 'Image')

Return and display the histogram of image data

Parameters

- **I** – grayscale image
- **n** (*int*) – number of bins, defaults to 20
- **figsize** – figsize of figure
- **filename** (*str*) – name of given image, to insert in title

Returns histogram counts, and bin locations

IMAGE FILTERING

fspecial(*type*: *str*, *hsize*: *int* = 3, *sigma*: *float* = 1.0)

Return a predefined 2D filter

Parameters

- **type** (*str*) – type of filter (*gaussian*, *prewitt*, *sobel*)
- **hsize** (*int*, *optional*) – size of filter, defaults to 3
- **sigma** (*float*, *optional*) – standard deviation for Gaussian filter, defaults to 1.0

Returns a 2D filter
